

# Tema 3a de Geografía: Caracterización general del clima en España

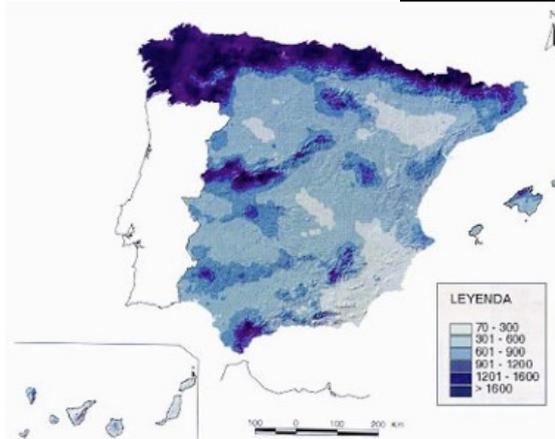

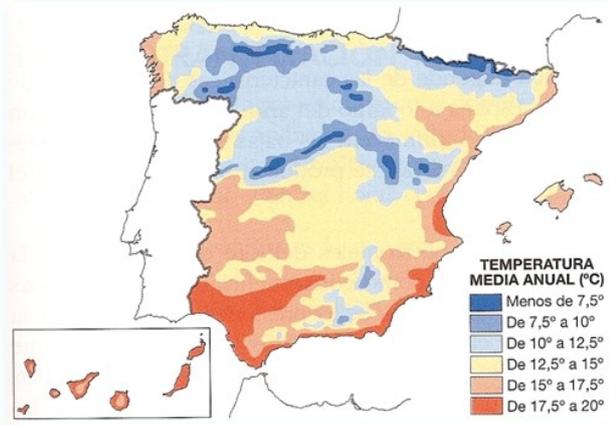

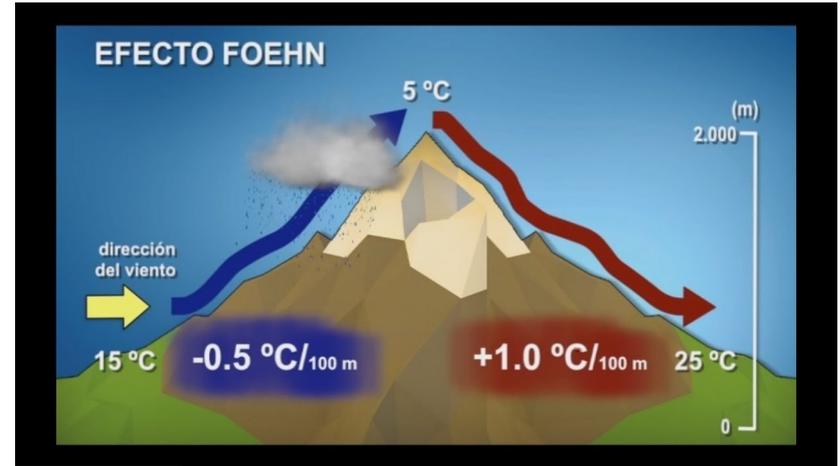

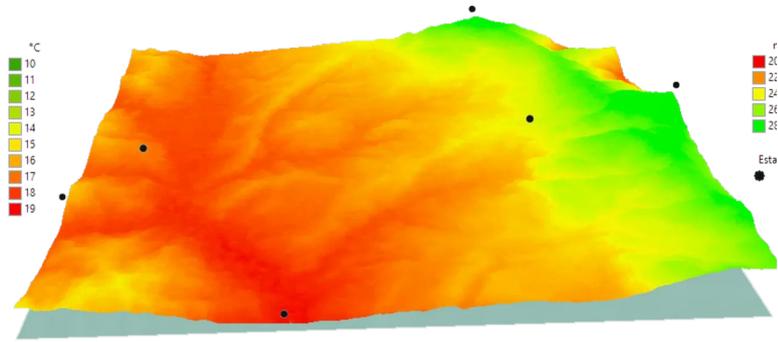

# Factores y elementos del clima

- Factores: geográficos (latitud, relieve, influencia del mar y posición) y termodinámicos (centros de acción, masas de aire, frentes y circulación en altura)
- Elementos: insolación-nubosidad, temperatura del aire, humedad atmosférica, precipitaciones, presión atmosférica, vientos y evapotranspiración-aridez)

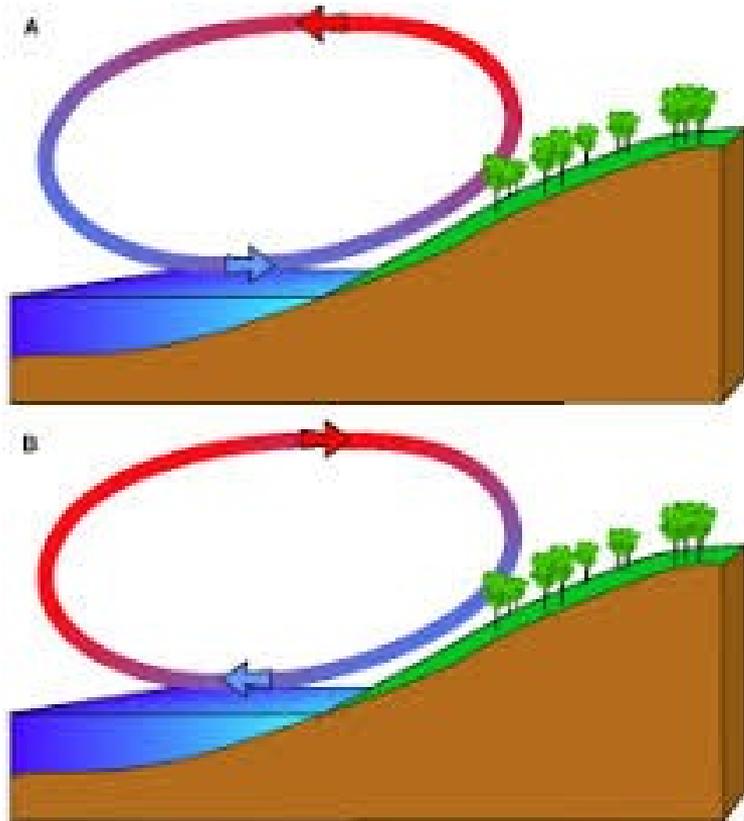

# Factores Geográficos 1: Latitud

# Factores geográficos 2: Relieve

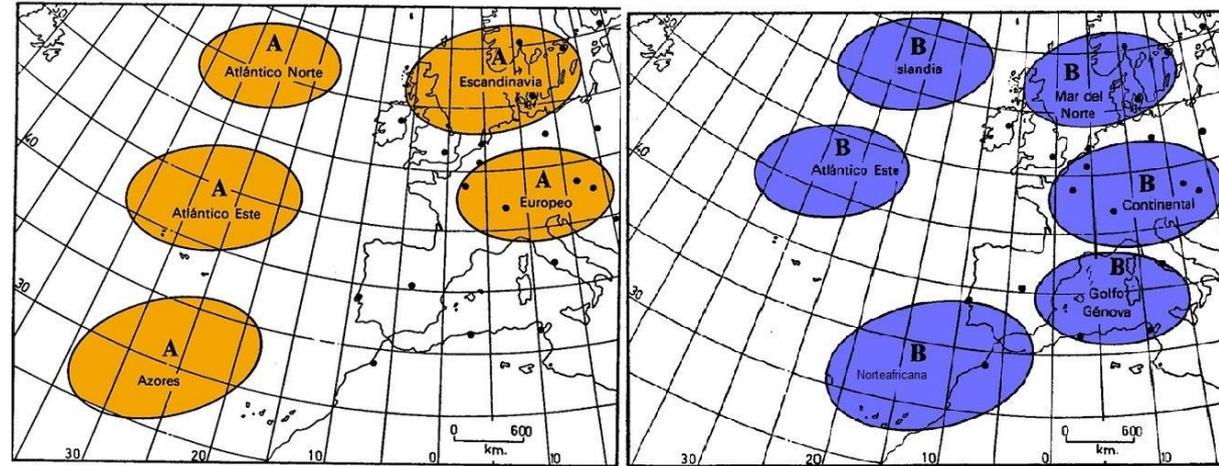

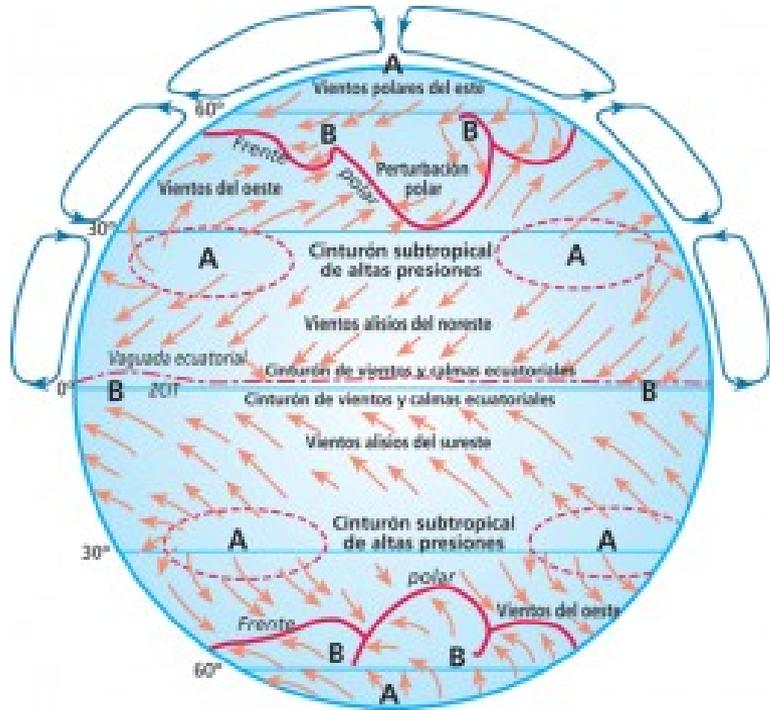

# Factores geográficos 3: Influencia marítima

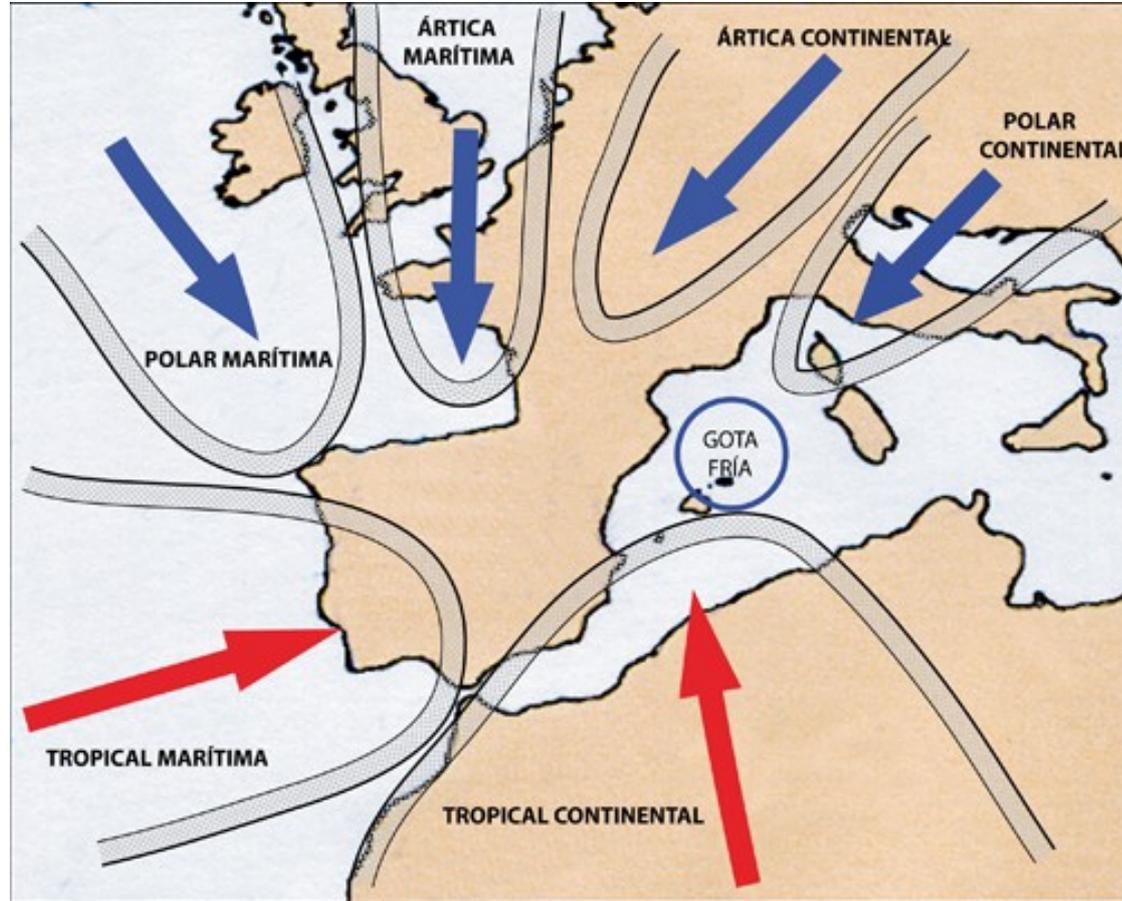

# Factores Geográficos 4: Posición

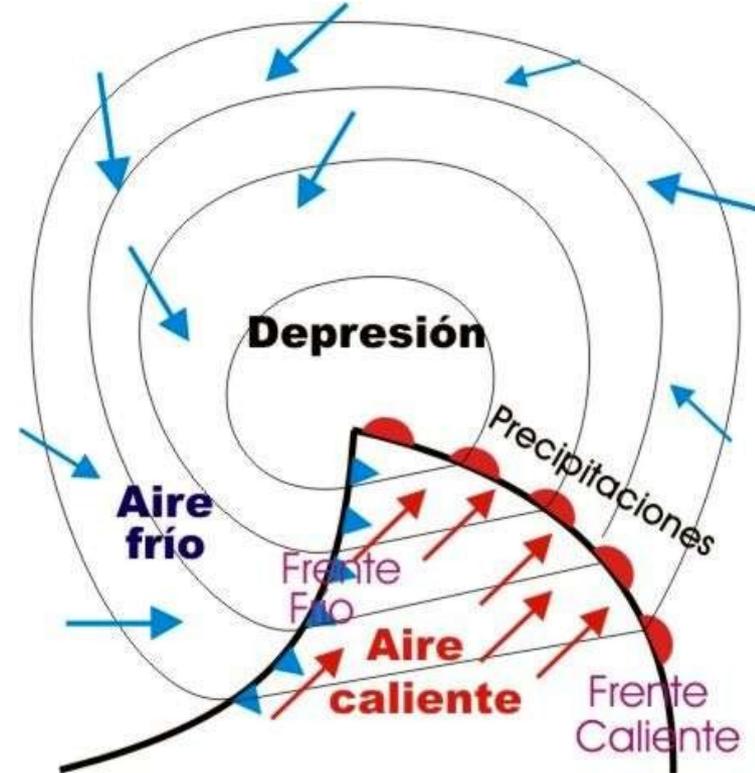

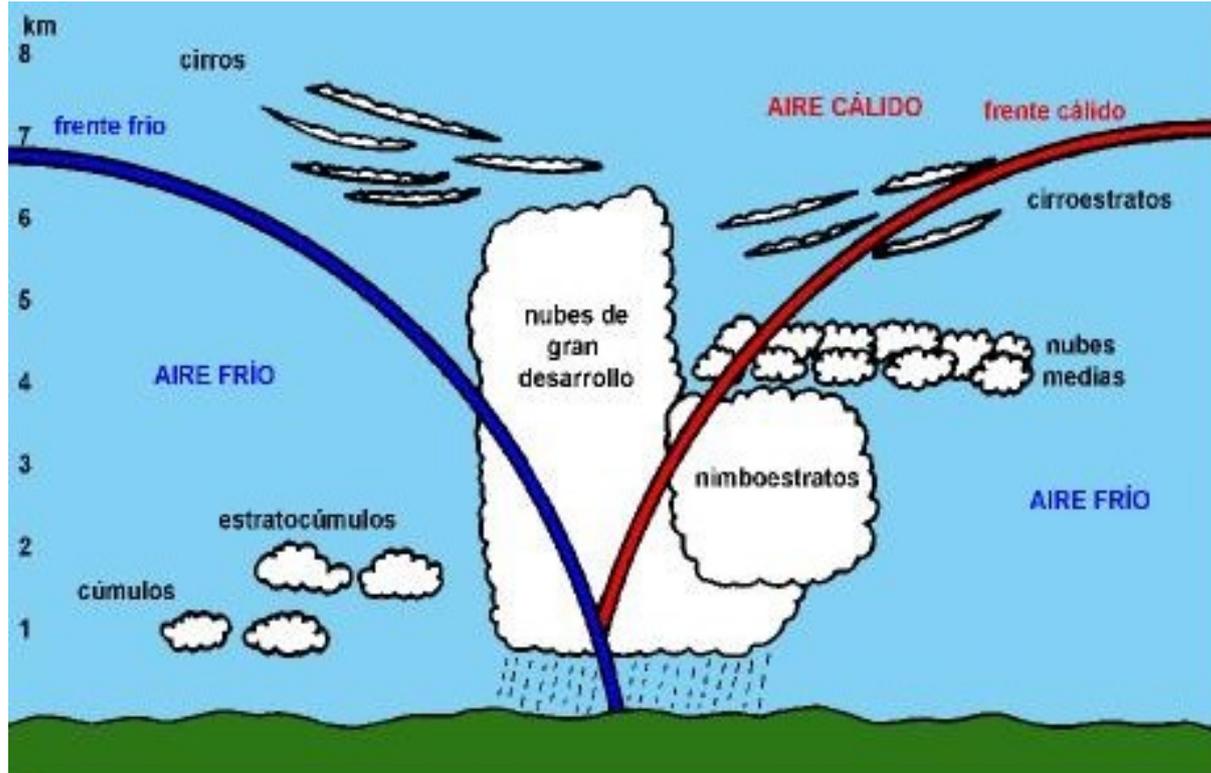

# Factores termodinámicos 1: centros de acción

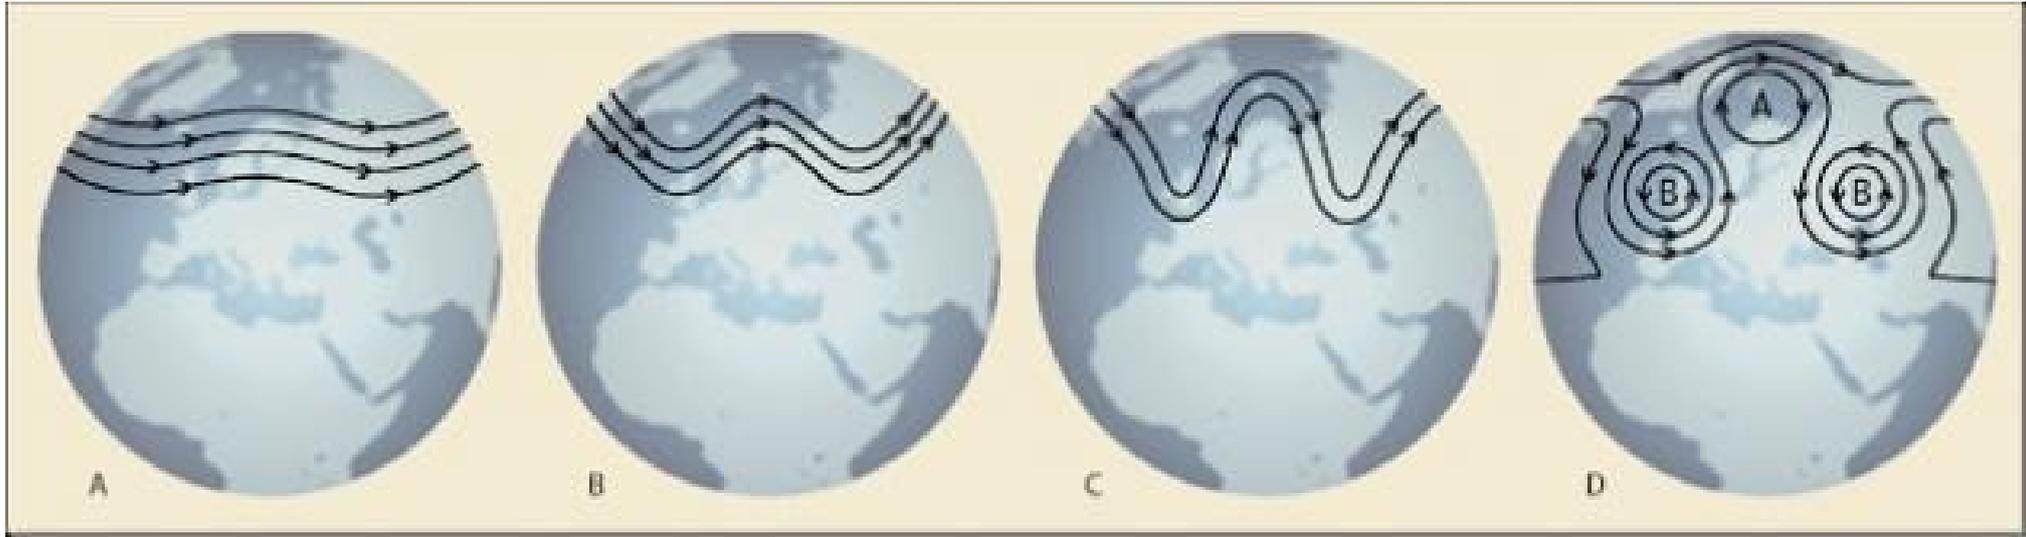

# Factores termodinámicos 2: masas de aire

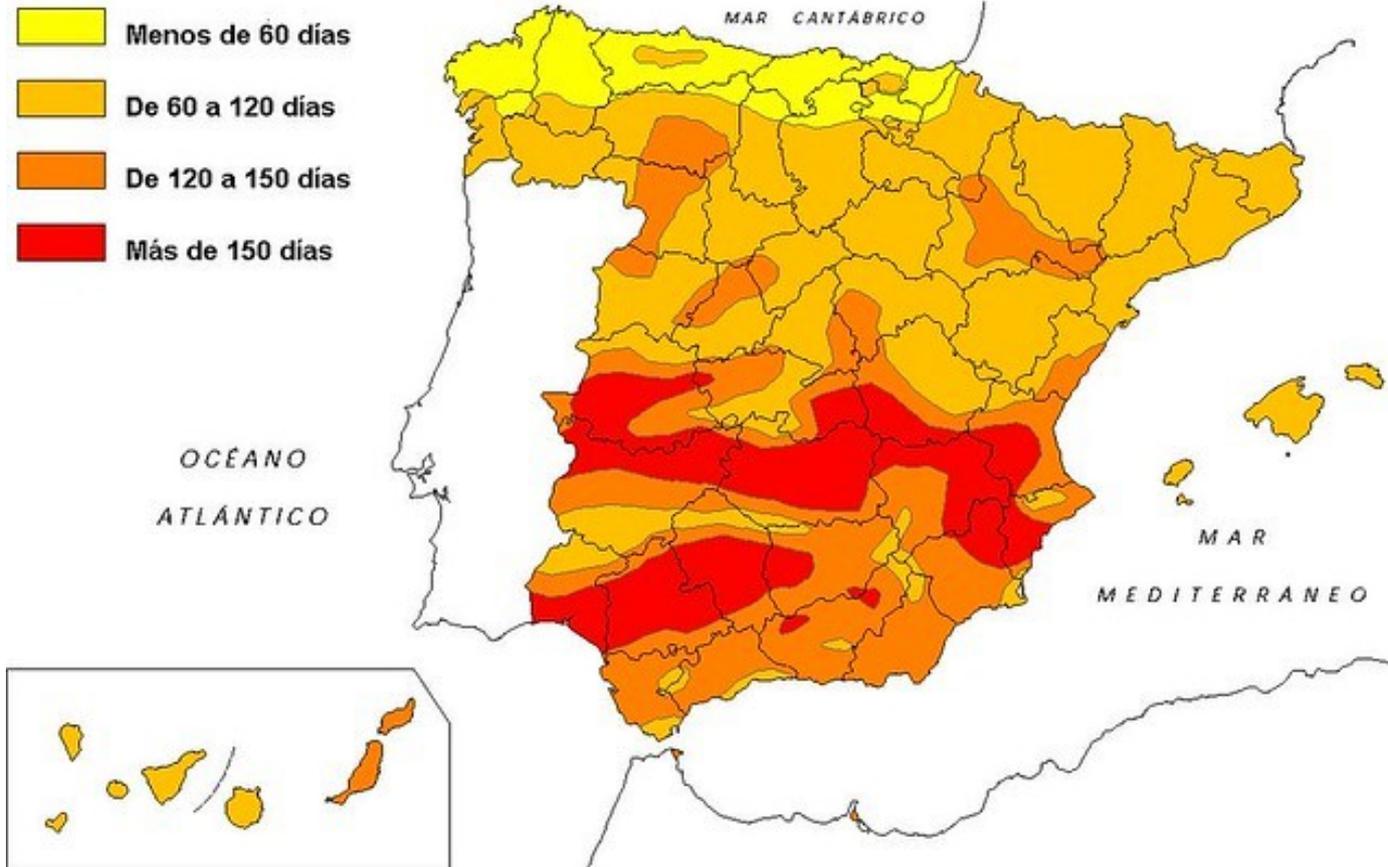

# Factores termodinámicos 3: Frentes

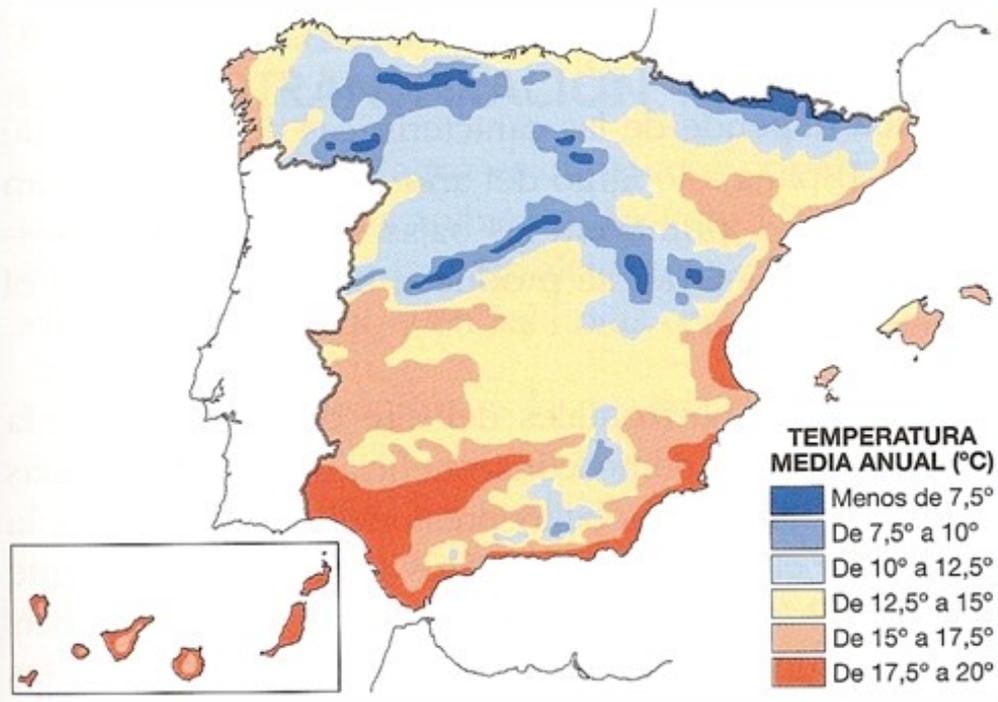

# Factores termodinámicos 4: circulación en altura

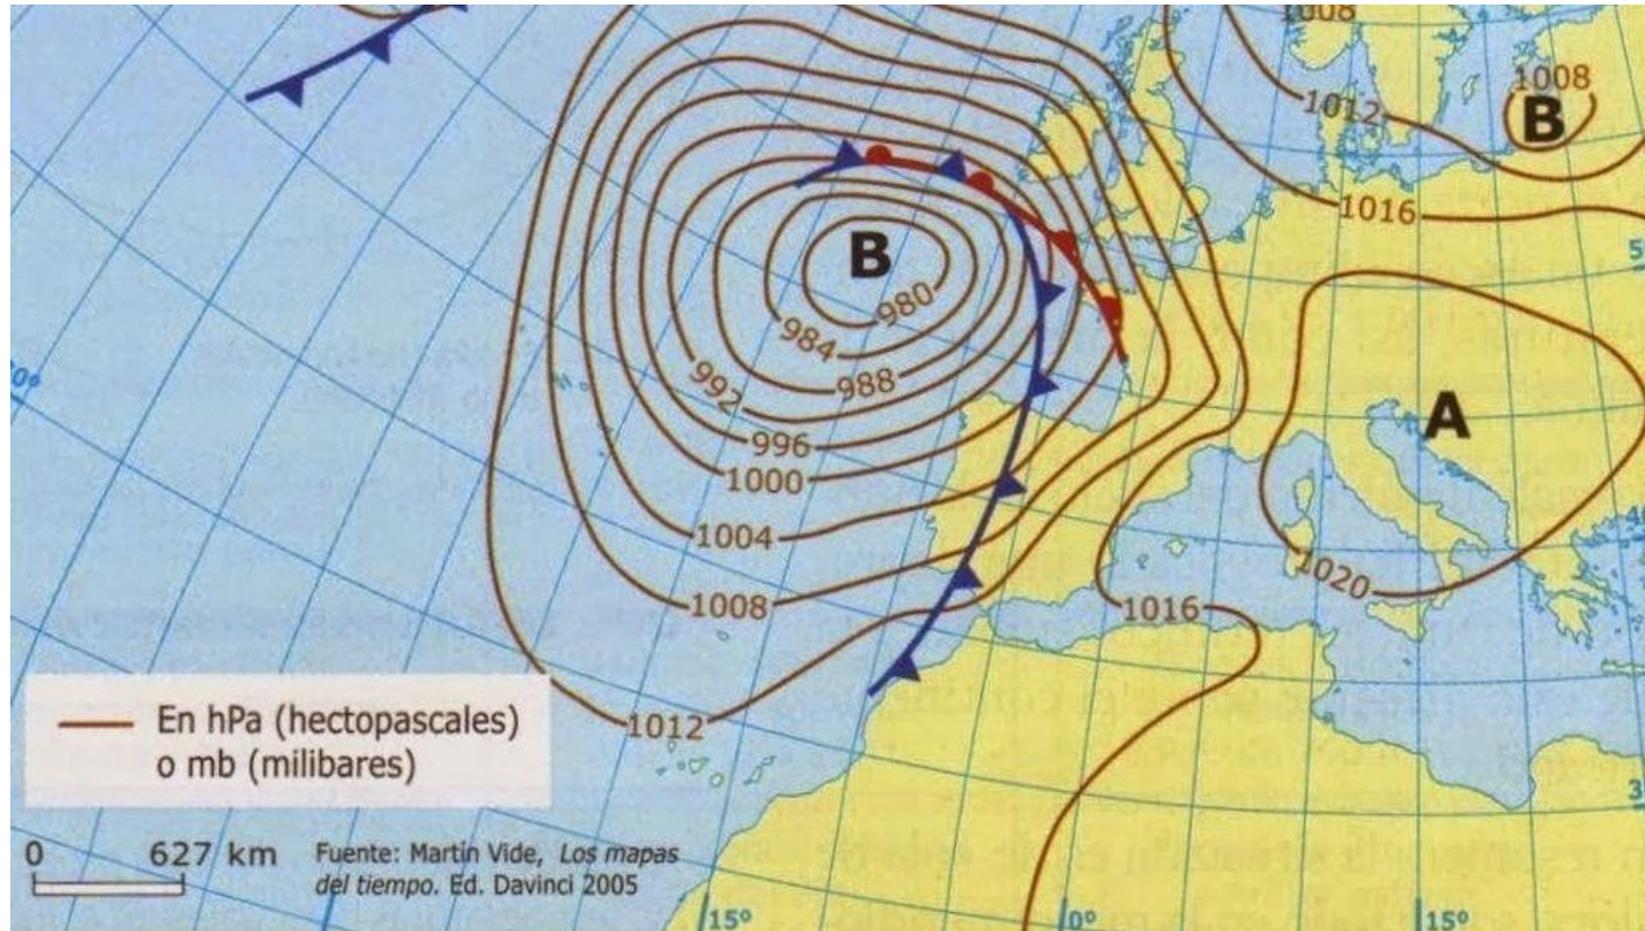

# Elementos climáticos 1: Insolación-nubosidad

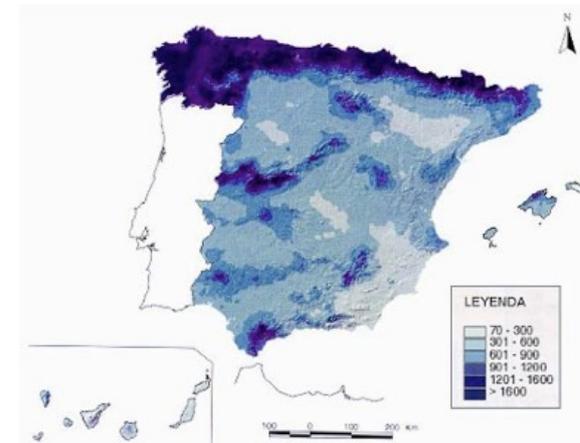

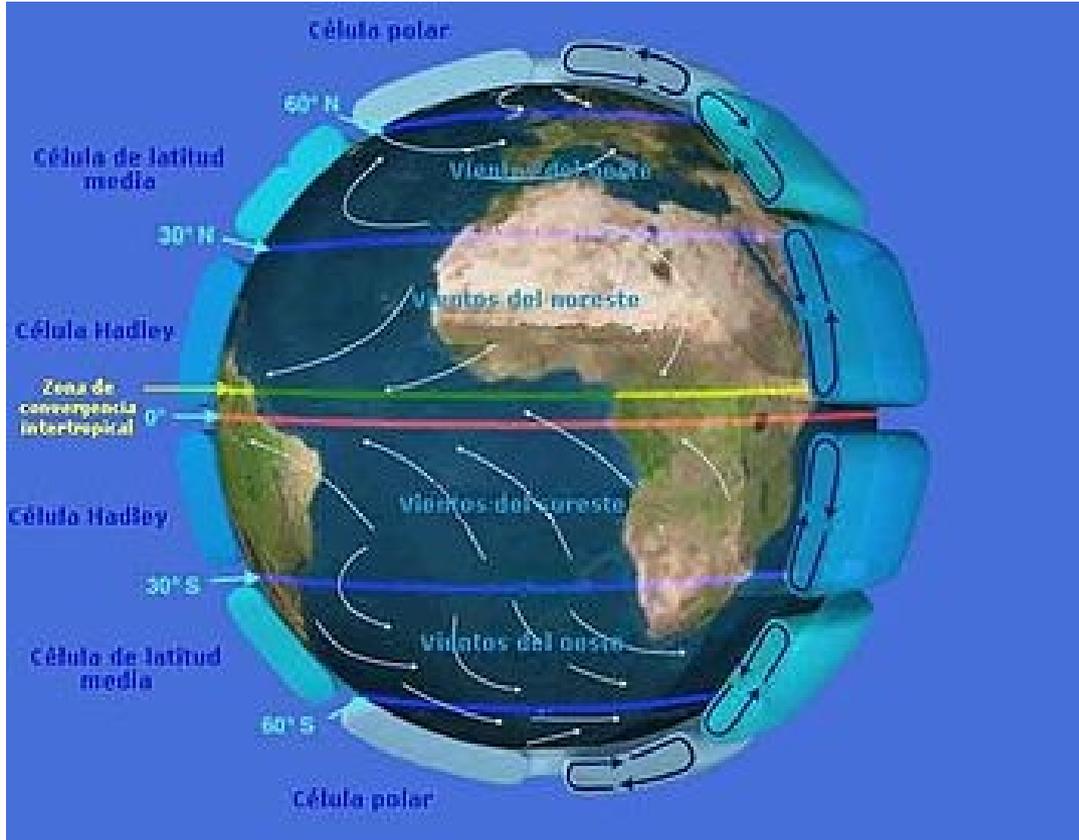

# Elementos climáticos 2: Temperatura del aire

# Elementos climáticos 3: Presión

# Elementos climáticos 4: Vientos

# Elementos climáticos 5: Evapotranspiración y aridez

Índice de Gausson (aridez mensual)

Un mes es árido si

$$P < 2T$$

$P$  = Precipitación del mes en mm.

$T$  = Temperatura media del mes en °C.
